As the economy continues to suffer, businesses are shutting down and more and more buildings are left vacant. How could these empty spaces be repurposed? Senior graphic design students at Oregon State University (located in Corvallis, Oregon) stood up to this challenge, envisioning resourceful and creative ways these vacant buildings could service needs within the local community. The parameters for this ten-week project were to propose an innovative, dual-purpose organization or business that could occupy an existing vacant building. The space needed to service the local community while also considering issues of environmental and financial sustainability.
